

Dalkeith High School

# Geography

Pathways from S1 to S6  
and beyond

## INTRODUCTION

The study of geography introduces pupils to our changing world and its human interactions and physical processes. Pupils develop the knowledge and skills needed to contribute to their local communities and wider society. The study of geography fosters positive life-long attitudes of environmental stewardship, sustainability and global citizenship. Practical activities, including fieldwork, provide opportunities for candidates to interact with their environment. Geography is one the most far reaching subjects that you can study. Geography will touch on aspects of Earth Science, Biology, Sociology, Anthropology, Hydrology, Climatology, Glaciation and Geology.
